the limit**

Bring the universe within your scope  
 - for a down-to-earth price!

**430316 • Weekly Special Value Price £84.58**  
 Tasco 200X Power Catadioptric Telescope • QVC Price ~~£102.50~~

Open up a whole new world of wonder and excitement for you and your family with this Tasco telescope. At less than £85, it's an affordable and accessible way to explore the mysteries of the galaxy and discover the moon, planets and stars as you've never seen them before!

Portable and easy to use, the telescope is an ideal choice to introduce the beginner to the exciting world of astronomy. It's a catadioptric telescope with a 600mm focal length, which means it uses both a 3" mirror and lenses to fold the optical path back on itself, making it more compact than refractor or reflector telescopes of similar power.

The 5x24mm finderscope makes it easy to scan the sky and locate distant objects quickly, so you can find the star you're looking for. And the equatorial mount can easily be aligned with the Earth's polar axis, making tracking celestial objects simply a matter of turning a knob.

The telescope also comes with a moon filter to remove glare and increase contrast for clearer viewing, a table tripod with rubber feet for stability, photo adaptor tube and moon and space maps to help you get your bearings.

Astronomy is a fascinating and educational hobby for children and adults alike - so start viewing eclipses, planets and distant comets, and watch as the universe opens up before you!

Features at a glance:	
600mm focal length	20mm eyepiece (gives 30x magnification)
6mm eyepiece (gives 100x magnification)	2x Barlow lens
3" mirror	5x24mm finderscope
